

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A fluid supply device having a flexible portion midway in fluid supply piping, comprising:

first filter means that traps foreign matter in the fluid on an upstream side of the flexible portion;

second filter means that traps foreign matter in the fluid discharged from the flexible portion on a downstream side of the flexible portion; and

pressurizing means that pressurizes fluid taken in from the upstream side and transmits the fluid to the downstream side, provided upstream of the flexible portion, wherein the first filter means is provided within the pressurizing means or between the pressurizing means and the flexible portion,

wherein a filter accuracy of the second filter means is lower than a filter accuracy of the first filter means so that the second filter means filters the foreign matter that has passed through the first filter means but has agglomerated in the flexible portion.

2-3. (Canceled)

4. (Previously Presented) The fluid supply device according to claim 1, wherein the flexible portion is a bellows-shaped pipe.

5. (Previously Presented) The fluid supply device according to claim 1, wherein the pressurizing means is a fluid pump.

6-11. (Canceled)

12. (Previously Presented) A fuel cell system incorporating the fluid supply device according to claim 1 in a reaction gas supply system.

13. (Original) The fuel cell system according to claim 12, wherein the reaction gas supply system is a fuel gas supply system.
